

STRAINERS

“Y” Type Strainer, Product Code: Y

Basket Type Strainer, Product Code: MB

There might be foreign materials inside the pipe line and they might damage the equipments when travelling together with flow.

These foreign materials might damage pumps, valves, check valves, flow meters and other equipments.

To prevent this problem, strainers should be used.

Strainers are a kind of filter consisting of body, cover, basket, seal, bolts and nuts.

They are used at inlet side of pipe lines, pumps, flow meters, valves, check valves and other similar equipments.

Their duty is to collect any kind of foreign material and dirt at flow.

They can be used in both sewage and clean water media as long as correct materials are selected.

Two tapped holes are ready on body at inlet and outlet sides of basket for fitting manometers.

When basket begins to fill with dirt, permeability decreases and each manometer begins to show different values.

When pressure difference reaches to top value, line is isolated and basket is taken out of body for cleaning.

Davit arm for lifting basket cover

Installation Position,

Flow should be horizontal and cover should be downside for Y type strainers where cover should be upside for basket type strainers.

On request, by means of a special draining system which is applicable for both types, cleaning of basket can be done automatically without taking it out.

Maintenance,

No maintenance is needed for a strainer installed in a pipe line. If it is uninstalled, we recommend cleaning inside and re-painting.

ACCESSORIES OF STRAINERS

STRAINER "Y" TYPE

Valve Standard : -

Body Length Standard : EN 558-1, S 48

Maximum allowable working temperature for all types of our valves is 80 degrees Celcius..
